## Welcome to IMMI!

Dear IMMI-User,

We are happy to welcome you in the world of IMMI. The IMMI package contains:

- Hardkey for software protection
- Short instruction how to install the software

## **Getting started**

- Download the software IMMI from our customer area on the website: https://immi.woelfel.de/en/customer-area.html
  You can reach it via the footer at the bottom of the IMMI website.
- First, install the main version and then the latest update along with the driver for the hardware key (automated through the IMMI installation).
- Plug-in the hardkey.
- Start the software IMMI.

You will find a webtutorial for the first steps in the customer area on our website.

We hope you enjoy using IMMI.

Your IMMI-Team

## Tips for the successful installation of the network hardkey:

- Plug in the hardkey on the server or on any computer in the network.
- The driver, HaspUSersetup.exe, for using the hardkey can be found in the IMMI installation directory in the Hardkey subfolder (e. g. C:\Program Files (x86)\IMMI 20xx\Hardkey).
- This driver must be installed locally on the computer running IMMI and on the server/computer where the hardkey is located.

Under certain circumstances, the license is not displayed when the program is started. In this case, perform the following steps:

- Open the address localhost: 1947 again in any browser.
- If the driver is installed correctly, the Admin Control Center appears in the browser
- Perform the following steps in the Admin Control Center:
  - Go to the Configuration menu
  - Click on the Access to Remote License Manager tab
  - Activate: Allow Access to Remote Licenses
  - Activate: Broadcast Search for Remote Licenses
  - Activate: Agressive Search for Remote Licenses
  - Under **Remote License Search Parameters** enter the server or computer name on which the hardkey is located. You can either enter the name of the computer or its IP address.
  - Confirm the entries by clicking Submit.
